

Add NGINX Process in Systemd Services to make the WebServer Resilient.

1. NGINX Init Services File.

<https://www.nginx.com/resources/wiki/start/topics/examples/systemd/>

2. Start Service

```
systemctl start nginx
```

3. Stop Service

```
systemctl stop nginx
```

4. Restart-Service

```
systemctl restart nginx
```

5. Check Service Status

```
systemctl status nginx
```

6. Enable service, auto-start on boot

```
systemctl enable nginx
```
